The Skedulo Pulse Platform ™

The industry's first platform purpose-built for the deskless workforce

Built on 5 pillars integral to powering deskless workforce solutions

Designed with a human-centric approach to mobile workforce management, the platform is built on the following pillars integral to powering deskless workforce solutions:

- Extensibility
- Automation
- Intelligence
- Developer Experience
- Security

Extensibility

Build better solutions, faster

Accelerate product development cycles and time to value by extending Skedulo's core product capabilities.

- Extend standard objects or create custom objects and fields
- Increase user engagement with customized interfaces for desktop and mobile
- Maximize platform value through integrations with third-party applications
- Bring the power of the platform to mobile devices, supporting workers on the go

Automation

Optimize workforce efficiency

By modeling your business rules and processes, our platform allows organizations to automate and streamline complex workflows for improved accuracy, increased reliability, and quicker time-to-service.
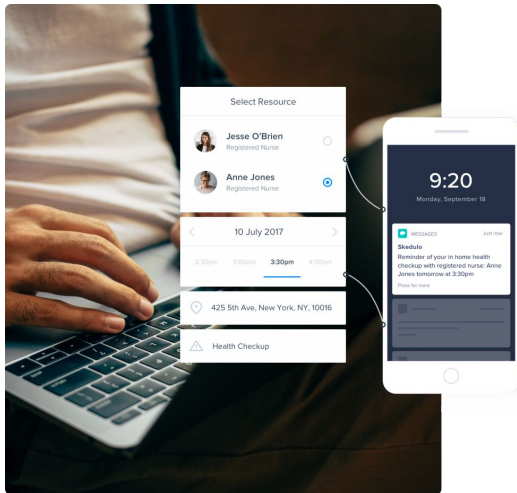

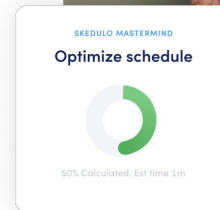

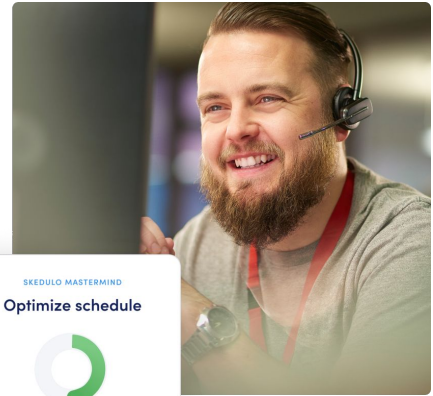

- Automate business processes with clicks, not code
- Enforce data quality and stay compliant with custom business rules
- Implement critical requirements with full-code serverless functions

Intelligence

Provide users with context and empower decision making

By leveraging the power of AI and machine learning, our platform helps, organizations transform data into actionable intelligence that engages users and drives customer satisfaction.

- Work smarter with exception-driven processes
- Gain insights with analytics and manage operations with reporting
- Build rich contextual interfaces for schedulers
- Simplify complex scheduling with AI-driven optimizers

Developer Experience

Unleash innovation and deliver business value

Skedulo enables productive interactions that engage developers as they create and build new solutions.
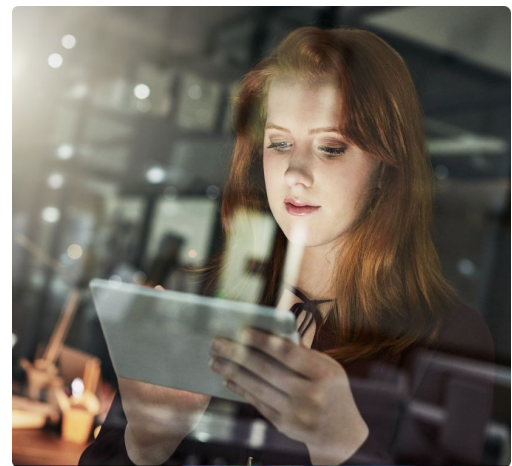

- Choose full-code, low-code, or no-code experiences
- Leverage comprehensive APIs for data, location, integration and events
- Access developer tools, SDKs, and design systems
- Distribute solutions or applications on the Skedulo marketplace

Security

Protect valuable data and mitigate risk

Enterprise-ready security capabilities ensure data and infrastructure remain protected and secure. With Skedulo, organizations can easily comply with regulatory and legal frameworks while maintaining visibility and context for schedulers and workers.

- Meet security and compliance requirements including data locality, audit-ability, and privacy
- Configurable user roles and permissions
- Enable single sign-on (SSO) and multi-factor authentication (MFA)
